DisplayFusion Remote Setup

DISPLAYFUSION

BINARYFORTRESS

DisplayFusion Remote

DisplayFusion Remote is a mobile application that allows you to run DisplayFusion Functions on your computer, right from the mobile app! DisplayFusion Remote is available on Android and iOS. You can do things like load the next wallpaper image, start the screen saver, and much much more!

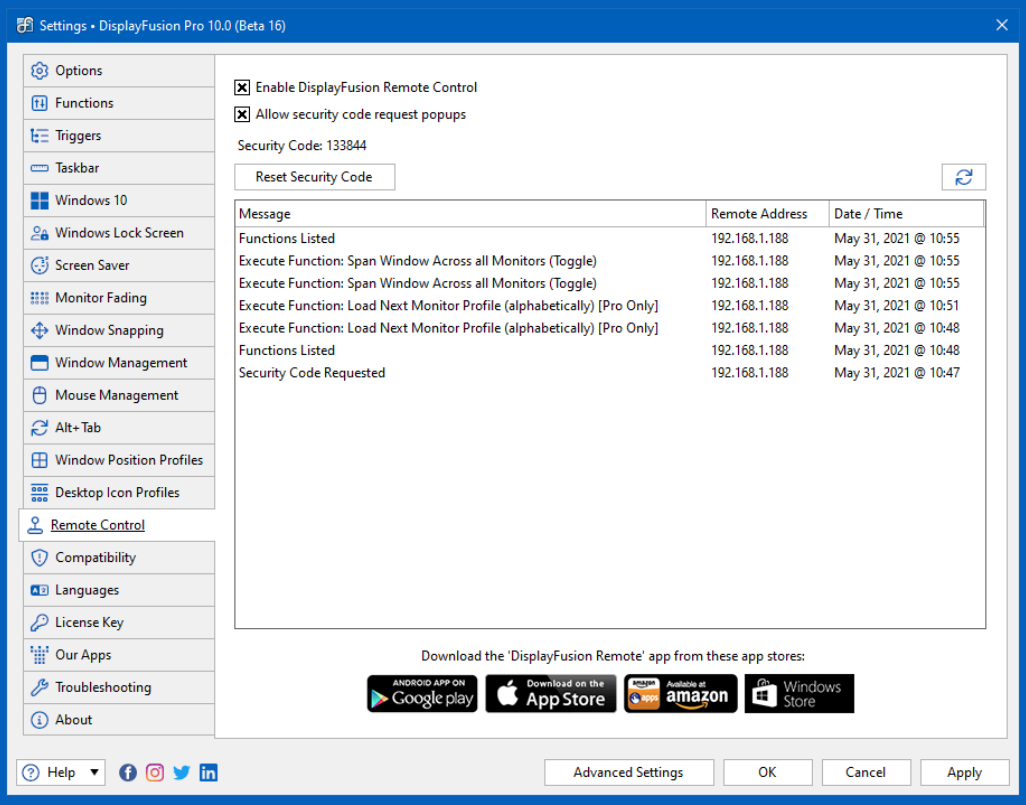

Remote use requires DisplayFusion 7.1 or higher be installed on your Windows PC.

Setting Up DisplayFusion Remote

From your Computer

Open the DisplayFusion Settings and select the Remote Control tab.

Ensure the "Enable DisplayFusion Remote Control" and "Allow security code request popups" options are enabled.

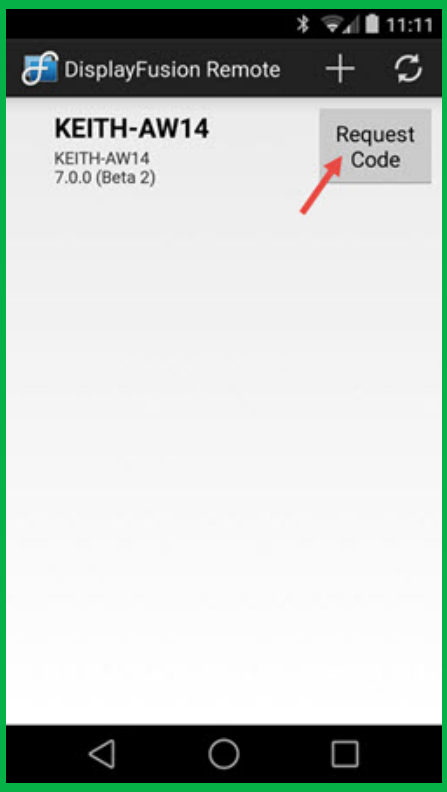

From Your Mobile Device

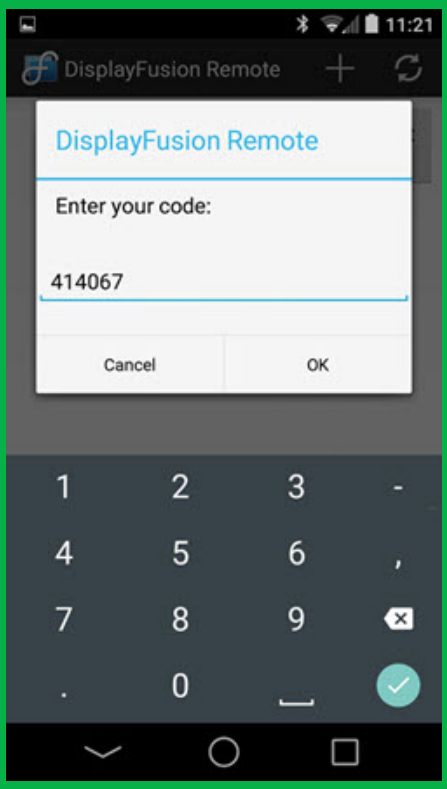

Install the DisplayFusion Remote app on your mobile device. (Available for Android, iOS, Windows Phone, and BlackBerry)

Download from **Google Play**, the **Apple App Store**, **Amazon**, or the **Windows Store**.

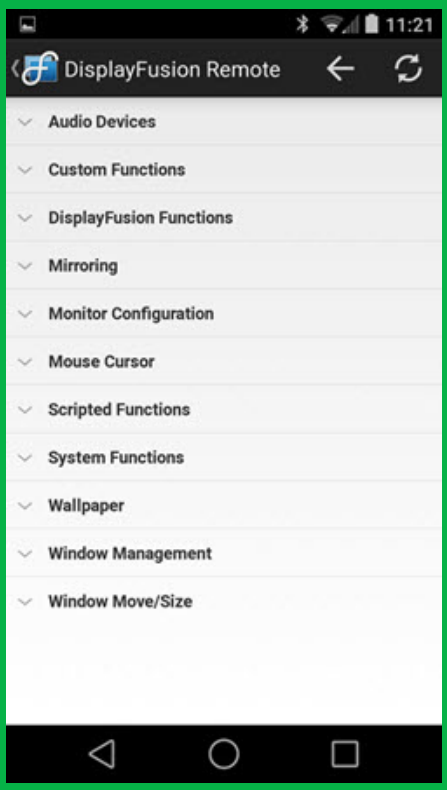

Launch the DisplayFusion Remote app and tap the "Request Code" button next to your computer name. *If your computer isn't automatically found, see Adding a Computer Manually below.*

Enter the Security Code that is displayed on your computer's screen and tap OK.

You should now see a list of all Functions in DisplayFusion.

Expand any category and tap a Function name to run it on your computer.

Adding a Computer Manually

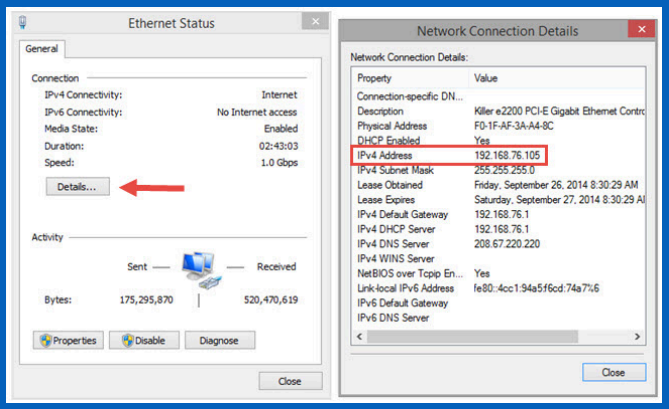

From your Computer

On your computer, open the Windows Control Panel > Network and Sharing Center.

Click the "Change adapter settings" link on the left side.

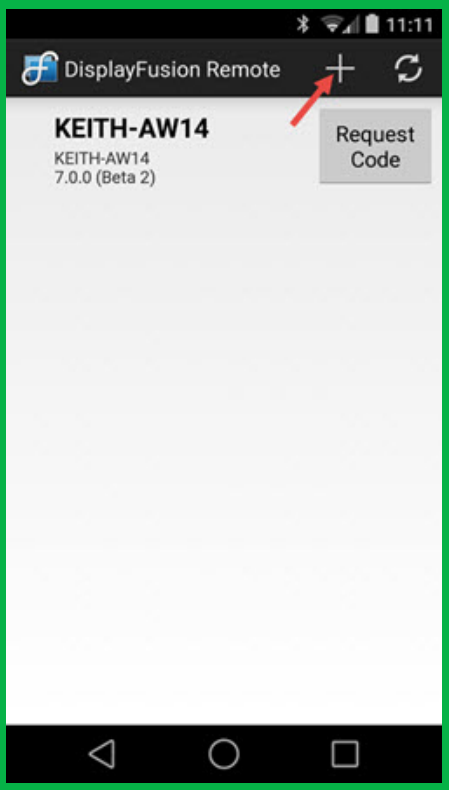

Right-click your network adapter and choose "Status."

Click the "Details" button and copy the IPv4 Address.

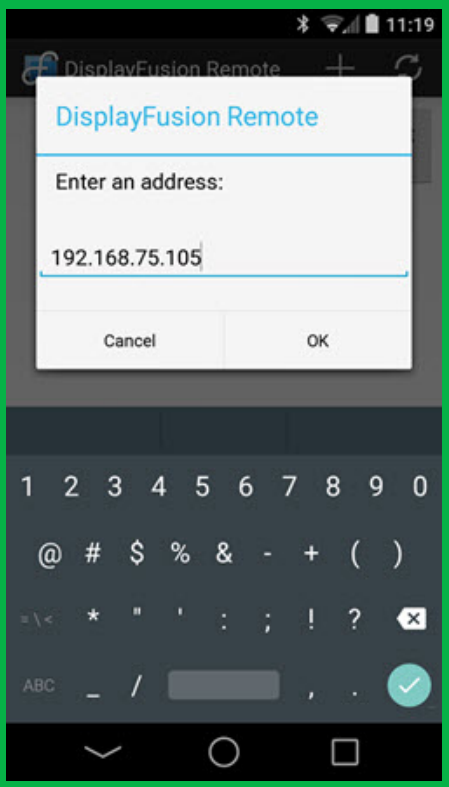

From Your Mobile Device

Open the DisplayFusion Remote app on your mobile device and tap the + icon.

Enter the IP address copied from the earlier step and tap OK.

Troubleshooting

If the DisplayFusion Remote app isn't able to automatically find your computer, and you can't connect manually by entering the IP address:

- Double-check that you've enabled the Remote Control feature in the DisplayFusion Settings.
- Make sure that DisplayFusion.exe is allowed through your firewall, or if you prefer to only open the specific port, make sure that TCP port 21452 is open.

About DisplayFusion

DisplayFusion gives users power and precision over their multi-monitor setup, with automation and customization options to create the perfect displays, every time.
